

**AMENDMENTS TO THE CLAIMS**

*Please amend the claims as follows:*

1-2. (Canceled)

3. (Currently amended) An apparatus for moving contents, comprising:

a receiver for receiving contents;

a first storage medium for storing the received contents; and

a processor for processing a program which controls the movement of the contents to a second storage medium by analyzing a copy control code of the contents and storing the contents in the second storage medium by converting the copy control code of the contents according to the result of the analysis, wherein the copy control code of the contents is converted by increasing by one ~~time~~ the possible number of copies of the contents if the copy control code is determined to indicate a restricted number of copies as a result of the above analysis and mutual authentication is performed between the first storage medium and the second storage medium.

4. (Previously presented) The apparatus of claim 3, wherein the processor converts the copy control code of the contents to a single copy, when the contents of which the copy control code is set as no copy are moved to the second storage medium.

5. (Previously presented) The apparatus of claim 3, wherein the processor deletes the original contents of the first storage medium after the contents move to the second storage medium.

6. (Previously presented) The apparatus of claim 3, further comprising an interface for interfacing between the first storage medium and the second storage medium.

7. (Currently amended) A method for moving contents, comprising the steps of:

analyzing a copy control code of the contents when a user demands moving the contents from a first storage medium to a second storage medium; and

storing the contents in the second storage medium by converting the copy control code of the contents according to the result of the analysis, wherein the copy control code of the contents is converted by increasing by one ~~time~~ the possible number of copies of the contents if the copy control code is determined to indicate a restricted number of copies as a result of the above analysis and mutual authentication is performed between the first storage medium and the second storage medium.

8. (Canceled)

9. (Previously presented) The apparatus of claim 7, wherein the copy control code of the contents is not converted if the copy control code is determined to indicate an unrestricted number of copies.

10. (Previously presented) The apparatus of claim 7, wherein the copy control code is converted to a single copy if the copy control code is determined to indicate no copies.

11. (Original) The apparatus of claim 7, further comprising a step of:  
deleting original contents stored in the first storage medium.

12. (Currently amended) A method for moving contents, comprising the steps of:

reading a set value of a moving determination bit in a header of packet of the contents if a user demands moving contents from a first storage medium to a second storage medium;

judging whether the contents can be moved according to the set value; and

moving the contents from the first storage medium to the second storage medium if the contents can be moved as the result of the above judgment by analyzing the copy control code of the contents and, wherein the copy control code of the contents is converted by increasing by one ~~time~~ the possible number of copies of the contents if the copy control code is determined to indicate a restricted number of copies as a result of

the above analysis and mutual authentication is performed between the first storage medium and the second storage medium.

13. (Original) The method of claim 12, further comprising a step of:  
deleting original contents stored in the first storage medium.

14. (Original) The method of claim 12, wherein the moving determination bit is set using a bit of the packet.

15. (Previously presented) The method of claim 12, wherein the step of moving is to copy the contents from the first storage medium to the second storage medium regardless of the result of judgment of the possible number of copies.

16. (Previously presented) The method of claim 12, wherein the step of moving comprises the step of:

deleting the original contents stored in the first storage medium after storing the contents in the second storage medium by converting the copy control code of the contents according to the result of the analysis.

17. (Canceled)

18. (Previously presented) The method of claim 16, wherein the copy control code is not converted if the copy control code is determined to indicate an unrestricted number of copies as the result of the above analysis.

19. (Previously presented) The method of claim 16, wherein the copy control code is converted to a single copy if the copy control code is determined to indicate no copies as the result of the above analysis.

20. (Original) The method of claim 12, further comprising the step of:  
copying the contents from the first storage medium to the second storage medium if the contents can not be moved by the set value.
